

Solve any 2(Two) of the following questions (7 marks each)

UNIT 1

1. Explain general architecture of Centralized computer system and Client Server System with neat and labeled diagram.
2. Explain with diagram, which different processes form a part of a Transaction transaction-server system.
3. Write a note of commonly used types of interconnection networks in parallel systems.
4. Write a note on various parallel database architectures.
5. Write a short note on. A. Interquery Parallelism B. Itraquery Parallelism
6. Write a note on Data Replication and data Fragmentation in Distributed data storage.

UNIT 2

7. What four join types are included in the INNER JOIN classification?
8. List possible security vulnerabilities that systems components are exposed to and some measures typically taken to protect against them
9. Discuss Policies, Procedures, and Standards, with respect to data administration strategy.
10. Write a note on Data Replication and data Fragmentation in Distributed data storage.
11. Discuss 2 Phase commit Protocol in detail
12. 2 State and explain the relational set operators with proper syntax
13. Explain types of interconnection networks in parallel systems.
14. Explain 2 Phase commit Protocol in detail
15. Write proper syntax and explain the relational set operators.
16. What is a CROSS JOIN? Give an example of its syntax.
17. What three join types are included in the OUTER JOIN classification?
18. What four join types are included in the INNER JOIN classification?
19. What is a subquery, and what are its basic characteristics?
20. What are the three types of results that a subquery can return?
21. What is a correlated subquery? Give an example.
22. Explain the difference between a regular subquery and a correlated subquery.
23. With help of basic syntax explain Sequences in detail.

UNIT 3

24. Explain following NoSQL Databases: Document Databases, Graph Databases, Key-Store Database
25. What are the limitations of RDBMS
26. With help of neat diagram explain “data-information-decision-making cycle”
27. Why Data becomes dirty? What efforts are required to maintain data quality
28. What is MongoDB? Describe the Structure of a MongoDB Document.
29. What is couchDB? Describe in detail.

UNIT 4

30. What activities a database must be able to do at Top Level Management, Middle Level Management and Operational Level Management
31. List possible security vulnerabilities that systems components are exposed to and some measures typically taken to protect against them.
32. Discuss 3 security goals related to Data Security

UNIT 5

- 33. Explain Policies, Procedures, and Standards, with respect to data administration strategy.
- 34. Determine cycle of Business intelligence analysis
- 35. Describe in detail main components of business intelligence systems
- 36. What is view? Explain materialized view.

UNIT 6

- 37. Give Phases of the decision-making process in decision support systems
- 38. List & Explain applications of data mining, OLAP operations.
- 39. Explain in detail BI Project factors, ETL tools.
